

Homework 02 - Share your travels photo details

In this assignment you will create a form and position the elements by placing them within a table. While it is not the best practice, older sites often use tables for layout so it may be good to get some experience with this approach. Later you will learn how to use CSS for layout as a better alternative. Use the attached files as a starting point for developing your page.

Check figure below as reference, that should be the end result of your page for this assignment.

- a) (5 pts) Text elements
Provide hints for the user
- b) (5pts) Drop-down lists
Add a few items in each. For the "Cities" make so when the user cliques it shows a few samples or the user can just type.
- c) (5pts) Radio button and Checkbox list
For the checkbox list, they should be an array of elements should be an array of elements, for example, `<input type="checkbox" name="index[]" value="2" />`. The name and values are arbitrary, but each checkbox needs to have a unique value.
- d) (5pts) Number control and color control
- e) (5 pts) Date and time controls, submit and reset
For styling of submit and reset make so that the color changes when the cursor hovers over.
- f) (10pts) Use of table elements and HTML5 elements
Make sure to use a table to position your elements
- g) (10pts) Styling your table so it looks similar figure below.
- h) (5 pts) Test the form in more then one browser. Verify that the output from process.php matches that shown in the figure below.

Submission of your work

Web Server:

Make the appropriate changes in your **index.html** so it links to your **homework02.html** web page
Your page should be available through your web server, if not you will not get full credit for this homework.
Once you finished your homework, copy your **hw02** files to the server. And test it by opening a browser (Chrome) and typing <http://yourServerIP/index.html>
Remember to organize your files: create a directory **hw02**, place the **homework02.html**, **homework02.css** and **reset.css** in this directory.

Reggienet:

Zip your **hw02** folder (contains the completed **homework02.html**, **homework02.css** and **reset.css**) and attach it to this submission.
